MANAGEMENT SYSTEM
SOLUTION ARCHITECTURE

Date	21 October 2022
Team Id	PNT2022TMID17642
Project Name	Industry - Specific Intelligent Fire Management System
Maximum Marks	4 Marks

SOLUTION ARCHITECTURE:

Solution architecture is a complex process – with many sub-processes that bridges the gap between business problems and technology solutions.

Its goals are to:

- Find the best tech solution to solve existing business problems.
- Describe the structure, characteristics, behaviour, and other aspects of the software to project stakeholders.
- Define features, development phases, and solution requirements.
- Provide specifications according to which the solution is defined, managed, and delivered.
